With the momentum system, the ball now moves a little faster in the air and is more difficult to pick up. These adjustments are smartly matched with player and ball physics based on the final outcome. "Enhanced Physic-Based Player Movements" FIFA 22 introduces enhanced Physic-Based Player Movements," explains Dr. Michael Schade, FIFA Lead Developer. "This technology brings the game closer to reality by allowing more naturally-feeling player movements and improved footwork. "Using data collected from 22 professional footballers playing a complete, high-intensity football match in motion capture suits, we have worked on the dynamic footwork of players and the accuracy of their movement. "Early tests show that the accuracy and the natural movements are more realistic than in FIFA 21. The player movements are more responsive to each other and therefore feel more life-like." "New AI Engine – Conversation and Aggression" To power more realistic conversations with other players and opponents, FIFA 22's AI system is a lot more advanced than in any previous FIFA game. It now understands the context of the game and reacts accordingly, for example, by talking to his teammates during critical moments. "In addition, the AI is more aggressive in handling the ball – instead of running into the opposing goal, it now can make more complicated passes or head your opponents. "The AI can also understand the flow of the game and defend his goal or the opponent's goal. "Alongside the AI system, the game's leadership system allows the team to have more influence on the game situation. While the team is not in possession of the ball, they can set up a defense, even if there is no opposition in sight. They can also change the game situation, like controlling the play from the centre-back position. "The AI system and the leadership system are a real-life representation of the player movements, behaviors and reactions in the game." New Boosting Ability FIFA 22 will introduce a new ability called Boosting. Players can enhance their players' attributes on the pitch, for example by setting a player's Speed and Ball Control to their maximum value. Boosts can also be set to Strength, Lactic Acid, Ability Points, and Stamina. Boosting helps the player to improve their attributes over time and in

FIFA is the world's leading football video game franchise. Since its first release in 1991 it has gone on to sell over 350 million copies globally. FIFA 20 – Powered by Football "Powered by Football" comes from the tagline – Our Game is Your Game – that EA SPORTS has introduced to FIFA 20. It reflects the passion and care we invest in FIFA, to make it both authentic and responsive to your experience. At the heart of this approach is a commitment to getting into your head and thinking like you, like your teammates and opponents, to understand the pressures and demands on your game. By giving you full control on the pitch, we aim to deliver the best football in the world. FIFA 20 FIFA 20 has a more traditional gameplay experience with controlled, tightly-balanced team passing. Throughout the game, your decisions and movements on the pitch can be influenced by the balance and weight of the ball, meaning that the game's physics mean that as you react to the situation, so will the game. This combination of dramatic and real-world physics, and the powerful response of the passing, shooting and dribbling mechanics, make FIFA more responsive than ever. It's a game where your movement, positioning and tactics make the difference. FIFA 20 is the first video game in franchise history to feature a live-in-game coach. A dynamic, one-to-one coach that's on the pitch with you when you play, to guide and teach you throughout the game. You'll get unparalleled access to the strategies and innovations that lead to match-winning glory. Powered by Football Free Practice and Game Trainers Powered by Football 2.0 gives you even more of what you need to succeed in your first-person game.
