Some popular brushes include Airbrush, Pencil, Eraser, and Sponge to name a few. It's always good practice to practice creating your own brushes. You can use the Brush Tool to create new brushes and modify existing ones. For more information, see [Make a new custom brush in Photoshop](#). 2. Effects Effects are a type of filter that can be applied to photos, text, or layers. They can be used to create cool effects like fizz, swirl, blur, and glass. They are also used to create a variety of other things like bevels, patterns, textures, drop shadows, perspective and more. Some popular effects include Glare, Grain, Gradient, Tile, Hue-Saturation, Drop Shadow, and Glow. You can access the effects that you have installed in Photoshop under Edit > Effects > Develop Module > Filter Gallery. 3. Textures Textures are interesting because you can use them to create distinctive visual effects that are often very difficult to produce in real life. For example, you can use textures to set a watercolor-type look on your textures. You can use any kind of image or shape to be a texture. The process for making new ones is described in detail in [Make a new custom brush in Photoshop](#). 4. Shadows Shadows are probably one of the most recognizable and useful Photoshop features. You can create a light or dark shadow by choosing a blur tool (like the Blur Tool or Gaussian Blur Tool) or making a selection and using the Shadow or Burn tools. The two most common types of shadows are Single Shadow and Multiple Shadow. To make a Single Shadow, select a part of your image and blur the edges with the blur tool. To make a Multiple Shadow, first create a selection that defines the areas where you want your shadow to be created. Then use the Shadow or Burn tools to create multiple shadows. You can use the layer mask to easily blend the effects into your image. 5. Thresholds and Masks Thresholds and Masks are used to make selections of specific areas of an image. You can use the Threshold tool for non-destructive selections or the Threshold Mask tool for destructive selections. The Threshold tool
